## CANNONBALL:HNP CUPOLAS

| CB 24 | CB 36 | CB 48 |

CannonBall:HNP Cupolas ship fully assembled with all necessary components, ready to install. Models CB 24, CB 36 and CB 48 are suitable for both metal and traditional styles of roofing and can be mounted either directly to the sheathing or secured to the underlayment/purlins. Our cupolas can also be shipped knocked down for field assembly to allow faster shipment options. CannonBall:HNP Cupolas will provide your building with traditional styling and a touch of class at an affordable price.

Our universal cupola base is field adaptable to roof pitches from 1:12 to 5:12. The base is constructed of 26ga or better galvalume steel layered with 26ga or better pre-painted galvanized steel. The base can be left solid for decorative-only applications or an opening can be cut in the top to provide additional ventilation. Just notch the base for the pitch of your roof and screw in the flashing for a clean, quality finish. Our universal base is a self-flashing unit for fast, easy and safe installation.

The sides and roof of CannonBall:HNP Cupolas are fabricated from pre-painted 26ga or better galvanized steel material. Most industry colors are available. When ordering, separate colors can be specified for the roof, sides, and base at no additional cost. All CannonBall:HNP Cupolas feature louvered sides to allow for field conversion of decorative models to ventilated models. All roof and side fasteners are fully concealed for a clean, finished appearance.

## STOCK WEATHERVANES

Antique Auto

# CANNONBALL:HNP CUPOLAS

| CB 24 | CB 36 | CB 48 |

The roof of CannonBall:HNP Cupolas features die-formed 25ga stainless steel seam locks for maximum strength and weather-resistance as well as enhanced visual appeal. Additional stainless steel reinforcements on roof interior make our cupola roofs stronger than competitive models. The gentle curvature of the roof seams provides a classic look while the rounded ends of our stainless steel seam locks provide additional safety against snagging and cuts from the roof corners during handling and installation.

The weathervane mount on all CannonBall:HNP Cupolas is constructed of 1/4" thick mill finish aluminum reinforced with 16ga galvanized steel. Mounting holes are pre-drilled and self-tapping screws are provided with the weathervane for rapid and easy installation. A variety of stock and non-stock cast aluminum weathervanes are available in standard color of black or in full color paint schemes.

## FLASHING KITS AND SCREEN KITS

CB Cupolas are available with six piece flashing kits where the builder constructs his own curb. The standard kit comes unnotched for easy adaptation to any roof pitch up to 5:12. An optional kit is available for pitches 6:12 and greater. Where screens are desired for pest control, our optional package includes fiberglass window screens mounted in a formed steel frame.
